

WITHOUT VACCINE, THE FUTURE IS UNCERTAIN

Much of the evolution of mankind is due to the discovery of vaccines. They prevent deaths and ensure that the world moves into the future with a healthy population.

In Brazil, vaccination coverage has fallen to 59% (2021), the

ideal level being 95%*. This drop brought back measles, which had been eradicated in 2016. In order not to miss the ride into the future, keep an eye on the National Immunization Program and keep your doses up to date!
